

COMPREHENSIVE VMS REPORTING

Eagle Eye VMS Reports Feature Sheet

Transform raw data into meaningful insights to support decision-making, ensure compliance, enhance internal communication, and optimize your VMS resources.

A variety of report types and scheduling options mean administrators can keep up to date with key insights, without being overwhelmed by data.

Key Features

- Reports can be narrowed to specific areas of interest, to reduce clutter and enable fast scanning
- Reports available in either formatted HTML or ultra-portable CSV format
- Daily, weekly, monthly, or other scheduling frequency options available
- User-friendly interface means users can start generating reports immediately

Extract Business Insights From Your VMS Data, Simply

Eagle Eye VMS Reports allows users to generate insights into their surveillance infrastructure. Reports can be run instantly on demand, or on a schedule – whether one-time or recurring. Have you ever needed an inventory of your on-site surveillance infrastructure? Or needed the right data to refine role-based permissions? Five available report types enable end users to understand the number and status of cameras and Eagle Eye Bridges/CMVRs they have access to, and to gain insight into their pool of authorized users.

Uses/Applications

- **Camera List:** Audit your camera inventory, and plan for the future
- **Camera Status:** Spot cameras that are offline or need attention, at a glance
- **Bridge List:** Know how many Bridges/CMVRs you have, and what kind
- **Bridge Status:** Ensure all Bridges/CMVRs are operational, online, and matching your video bandwidth needs
- **User Permissions Report:** List all users, their permissions, and when they last logged in, to design and enforce appropriate access policies

HTML reports include charts for instant visual clues about your surveillance system's status.

Eagle Eye VMS Reports is available in both the Professional Edition and Enterprise Edition of the Eagle Eye Cloud VMS.
